

ABSTRACT

The invention relates to a filing appliance, a system for information management, a method in a computer system, a computer program and a memory medium. The filing appliance includes a holder for holding a plurality of sheets, with at least one input field, which is provided with a position-coding pattern and is adapted to be filled in using a drawing device, which while using the position-coding pattern records positions in the input field in order to record information entered in the input field, and an initiation icon provided with a position-coding pattern, a marking of the initiation icon using the drawing device being adapted to initiate an operation in a computer system communicating with the drawing device, in which operation an information object is created, which is identifiable at least by information entered in the input field.
